

PRS S5

PRS S5 PROJECT

Telematic Solutions has been chosen by its historical customer CNES, to renew the monitoring system of risk operations on the EPCU site at the Centre Spatial Guyanais (CSG).

The scope of this project is the updating and technological improvement of instruments used every day, to guarantee security of operations done by satellite customers.

Systems used nowadays will be substitute by redundant and automated acquisition systems, to ensure and satisfy safety standards, in the same way, the pulpits which are used by on site safety operators, will be renewed.
