

VEGA C

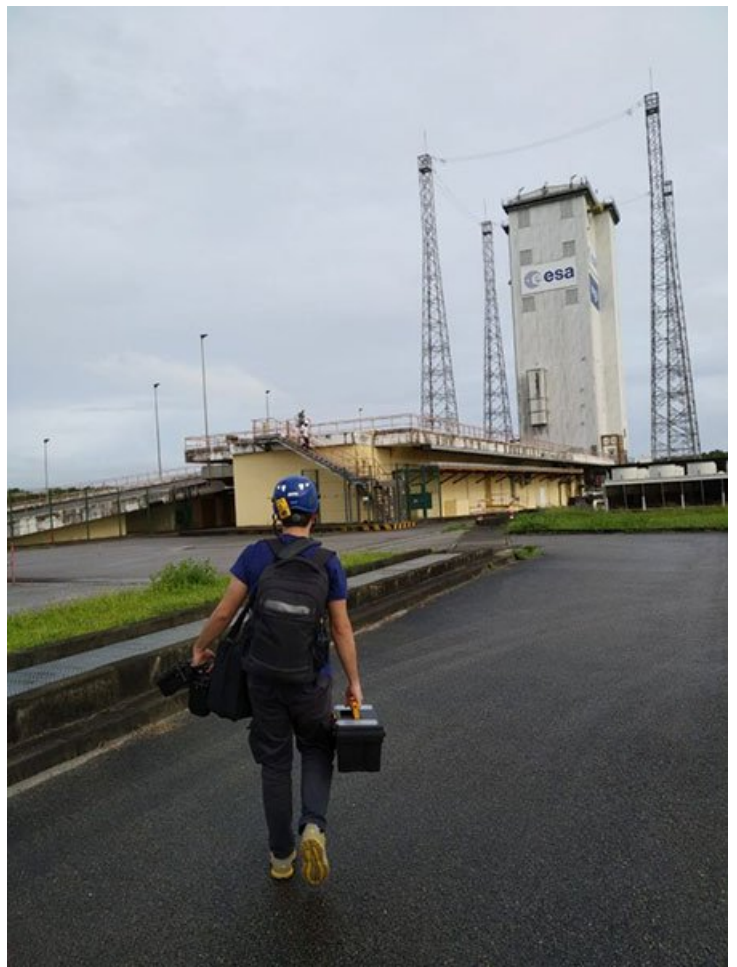

VEGA C

Vega C is the evolution of the actual Vega launcher, the smallest of the European ones.

The capacity of load of Vega C will increase passing from the actual 1500 kg of the Vega up to 2200 kg in orbit LEO. Telematic Solutions contributes actively to the realization and renovation of the ground infrastructures linked to the new launcher.

Telematic Solutions actively contributes to the construction and modification of ground infrastructure related to the new launcher.

In particular, Telematic Solutions is responsible for the design, supply, installation and commissioning of all "low currents" electrical systems and all conventional fluidic and propellant systems.
