

the 1990s, the number of people in the world who are employed in the service sector has increased from 1.2 billion to 2.2 billion, and the number of people in the manufacturing sector has increased from 1.1 billion to 1.5 billion.

As a result of these changes, the world economy has become more service-oriented, and the service sector has become the dominant sector in most developed countries.

The service sector has also become a major source of employment in developing countries, and is expected to continue to grow rapidly in the future.

The growth of the service sector has led to a number of changes in the way that services are produced and delivered, and has also led to a number of new service industries.

Some of the new service industries that have emerged in the 1990s include the internet, e-commerce, and the service economy.

The service economy is a term that is used to describe the economy of a country that is dominated by the service sector.

The service economy is a term that is used to describe the economy of a country that is dominated by the service sector.
